Miami Seaquarium® Scavenger Hunt

1. This fish has no scales, rather a thick skin covered in mucus, which helps to protect the animal from parasites and infection. Although it appears to be green in color, the animal is actually a shade of blue. It is the yellow mucus covering the blue skin, which gives it a green appearance. What kind of fish is it?
2. This invertebrate is covered with sharp spines. By smacking its long front antennae together, this animal produces a loud cracking noise in the hopes of scaring away predators. What is the name of this invertebrate?
3. Why are flamingos pink?
4. Name one difference between a seal and a sea lion.
5. Circle which state name best describes the official name of the sea lion species in our park.
 - a. Florida
 - b. California
 - c. New York
 - d. Kentucky
6. Where did the name Killer Whale derive from?
7. How many teeth does Lolita have?
8. How big are Lolita's teeth?
9. In which ocean would you find the White-sided dolphins living with Lolita?
 - a. Pacific
 - b. Indian
 - c. Atlantic
 - d. Artic
 - e. Caribbean
10. What happened to the manatee named Phoenix?
11. It is believed that manatee's closest relative is this land mammal?
12. List two reasons why sea turtles are endangered.
13. Where in the world can you find the world's third largest barrier reef?
14. Describe three types of coral reefs.
15. List the five husbandry behaviors we ask our dolphins to perform.
